SUMMARY

Computer Science undergraduate focused on SOC and blue-team fundamentals, with hands-on experience in network traffic analysis, threat detection, and security research. Currently building CyberGuardian, an AI-powered analyzer for detecting phishing and social-engineering attacks on suspicious URLs and messages. Built a Python/Scapy packet analyzer that detects anomalous traffic patterns and generates incident reports. Completed TryHackMe pre-security labs and Google/Deloitte cybersecurity simulations. Seeking a SOC Analyst / Cybersecurity internship to apply monitoring, detection, and incident-response fundamentals.

SKILLS

Security & Monitoring: SOC Fundamentals, OWASP Top 10, Risk Assessment, Access Control, Authentication Basics

Networking: TCP/IP, DNS, HTTP/HTTPS, OSI Model, Port & Protocol Analysis

Tools & Platforms: Packet Analysis (Scapy), Linux CLI (Ubuntu), Virtual Machines, GitHub, TryHackMe, Streamlit

Programming: Python, C++, HTML

Soft Skills: Technical Documentation, Communication, Team Coordination, Problem Solving

PROJECTS

CyberGuardian — AI Threat Analysis Platform Python, Streamlit | In Progress

- Analyzer detecting phishing/scams by extracting security indicators (URL reputation, SSL validity, urgency/authority patterns) and translating findings into actionable risk assessments
- Targets college students facing fake internships and payment scams — directly applicable to SOC threat-detection patterns

Network Traffic Analyzer Python, Scapy, Linux (VirtualBox)

- Built real-time packet capture tool identifying source/destination IP, protocol (TCP/UDP), and port
- Implemented threshold-based anomaly detection flagging IPs exceeding 15 packets (brute-force/DDoS pattern simulation)
- Generated timestamped CSV incident reports for SOC-style log review and analysis
- Applied TCP/UDP protocol analysis across common ports (443, 53, 22)

Linux & Networking Practical Training Jan 2026

- Practiced Ubuntu VM file management, permissions, sudo usage, and process monitoring
- Studied LAN concepts, DNS resolution, and end-to-end web request workflows

EXPERIENCE & LEADERSHIP

Intern — AI-Assisted Sensory Regulation Project Aug 2025 – Sep 2025

- Analyzed multi-modal datasets and performed feature engineering to support a predictive model reaching 93.3% accuracy
- Applied structured, detail-oriented data review and privacy considerations in a research setting

Project Management Intern — Pehchaan, The Street School (NGO) Remote | Feb 2025 – May 2025

- Coordinated with 10+ partner organizations on educational outreach programs
- Managed communication, scheduling, and documentation across initiatives

General Secretary — Entrepreneurship Cell, IPCW 2024 – Present

- Led planning, communication, and execution of college-level events and student teams

EDUCATION

B.Sc. (Hons.) Computer Science — Indraprastha College for Women, University of Delhi Expected 2027

CGPA: 7.5/10 | Relevant Coursework: Computer Networks, Operating Systems, Data Structures, DBMS, Python, AI

CERTIFICATIONS & ACTIVITIES

- CompTIA Security+ – In Progress (Expected 2026)
- Google Professional Cybersecurity certification – Coursera (2026)
- Cybersecurity Notes Repository – GitHub/Medium: Documented Linux, networking, DNS/TCP-IP concepts (Jan 2026–Present)
- Deloitte Cyber Job Simulation (2025)
- Pre-Security Path – TryHackMe (2026)
- Participant – Hack Defense Summit 2025
